

Medication Web app for varying illnesses

Elisabeth Johnson

METIS - Data Engineering

June 12, 2022

Project Aim

The aim of this project is to provide an avenue for people (and doctors!) to either refresh their memory on, or **learn more about, which prescriptions are available** for different illnesses.

This project also aims to address any confusion or hesitancy people may have towards certain prescriptions by providing them with **real and honest reviews** about various prescriptions for any illness within the WebMD database tailored to their risk level.

Project design

For this project I used...

- StreamLit as an interactive visualization platform
- SQLite as a resource for data storage.

Resources Used

kaggle.com

Ailment

Abnormally Increased Pressure in... ▾

Ease Level

Medication Database for varying Illnesses

This tool may be used to identify prescriptions available for varying illnesses. On the left please select the condition you are interested in followed by your ease of use and comfort level with treating this illness.

Prescriptions available and their average effectiveness and Satisfaction for Abnormally Increased Pressure in the Veins of the Liver can be found below:

The background is a solid teal color. There are six olive green pill-shaped elements arranged in two vertical columns of three on either side of the central text. The bottom of the image features a dark teal horizontal band.
